

Something New is Hatching...

There is a new name in Optical Brighteners, the Bright product range from Hans Andersson Chemicals now features a simplified naming system.

The new product name only includes the number of sulphonated groups:

Bright 2 Liquid

Bright 4 Liquid

Bright 6 Liquid

Urea containing products are indicated with a U:

Bright 2U Liquid

Bright 6U Liquid

This should make it much easier to do business.
What hasn't changed is the highly competitive price !
